Profit by ShipMode

Insights

- California, New York, Washington, Michigan, and South Georgia are the top 5 states having the most profit in the superstore.

- Texas, Colorado, Illinois, Pennsylvania, Ohio, and North Carolina are some of the states having the least profit in the superstore.

- The highest-selling products are Phones, Chairs, Storage, Tables, and the lowest-selling products are fasteners, labels, envelopes, art, etc.

- Some of the products like tables, bookcases, and supplies have a negative profit which shows that these products are in loss

Insights

- Technology products seem to provide greater profits and higher sales than other category products. The superstore should consider having more technology products.
- Here, we can see a linear relationship between sales and discounts. If the sale is higher, the discount rate will likely be high. However, there are many outliers.
- The superstore is getting the highest profit from consumers in Technology & Office Supplies category. Profits from the furniture are equal across all segments.
- Profit & Sales is higher from standard shipping mode. This makes sense in real life, too, as most people prefer standard shipping.

Insights about possible business problems

- The sales for the furniture category are very high; however, we get the lowest profit from it. Therefore, the business should consider decreasing furniture sales.

- It is quite interesting that the sales of the tables are high, but the profit is negative. The reason behind this could be the higher discount for tables. Therefore, decreasing the discount rate for tables will be helpful for increasing the profits and, in turn, improving the business.

- Some of the business problems could be solved by decreasing the discount rate.
